Pressure - Dry Differential Switch

SPD910 Series

Product Description

This series of four SPD910 differential air flow switches are intended for use in air handling systems for the monitoring of air ducts, filters and fans.

The enclosure is plastic with a rating of IP54. A set-point adjustment is provided under the clip-on clear plastic cover.

Supplied complete with mounting adaptor ring, two straight duct probes and 2 metre (6.56 feet) length clear tubing.

Features

- Easy to install
- User friendly snap cover
- Case geometry allows easy cable lead-in
- Cable strain relief integrated in PG11 (DIN 40430)
- High adjustment accuracy through individual laser etched scale
- Long-term stability of switching points through trapezoidal bead diaphragm
- Multi-layer gold plated contact

Functions

The pressure switch has two separate pressure chambers, each with its own connection. The change-over switch operates according to the user-defined set-point and type of monitoring application required. Normally closed, the switch contact is made across terminals 1 and 2; when normally open the switch contact is made across terminals 1 and 3.

Vacuum Monitoring

Connect the pressure switch via P2. Do not connect P1. Leave P1 open. Make sure that debris cannot get into P1.

High Pressure Monitoring

Connect the pressure switch via P1. Do not connect P2. Leave P2 open. Make sure that debris cannot get into P2.

Filter Monitoring

Connect P1 before the filter and P2 after it.

Fan Monitoring

Connect P1 after the fan (in air flow direction) and P2 before the fan.
